

AI Decision-Support Report

Case: 50a418190bc3fb1ef1633bf9678929b3

Chest X-ray

Recommendation: supported
Confidence: high

Supported findings:
No finding

Uncertain findings:
None

Supported global buckets:
No acute abnormality

Localization support:
None

AI Decision-Support Report

Case Summary

- Recommendation: supported
- Confidence: high
- Final labels: No finding
- Supported findings: No finding
- Uncertain findings: None
- Localization support: None
- Supported global buckets: No acute abnormality
- Uncertain global buckets: None

Rendered Report

AI Decision-Support Report

Case Summary

- Recommendation: supported
- Confidence: high
- Final labels: No finding
- Supported findings: No finding
- Uncertain findings: None
- Localization support: None
- Supported global buckets: No acute abnormality
- Uncertain global buckets: None

Findings

No abnormal findings are strongly supported by the current model evidence. The image-level classifier favors No finding with probability 1.00, and the detector did not produce any abnormal localized findings above threshold.

Impression

No acute abnormality is supported by the current decision-support workflow. This is a normal-model summary rather than a diagnostic clearance, and human review remains required.

Support Summary

Supported Findings

- No finding: high (Swin 1.00); YOLO boxes: not expected for this label

Uncertain Findings

- None

Top Swin Probabilities

- No finding: 1.00
- Pulmonary fibrosis: 0.00

Rendered Report (cont.)

- Other lesion: 0.00
- Lung Opacity: 0.00
- Pleural thickening: 0.00

YOLO Detections

- None

Safety

This is an AI-generated decision-support summary that requires human review for clinical use. Final interpretation must be performed by a qualified radiologist.

Model Evidence Summary

Top Swin probabilities:

- No finding: 0.999
- Pulmonary fibrosis: 0.000
- Other lesion: 0.000
- Lung Opacity: 0.000
- Pleural thickening: 0.000
- Nodule/Mass: 0.000
- Calcification: 0.000
- Atelectasis: 0.000

Top YOLO detections:

- None
