

AI Decision-Support Report

Case: 9a5094b2563a1ef3ff50dc5c7ff71345

Chest X-ray

Recommendation: supported
Confidence: high

Supported findings:
Cardiomegaly, Aortic enlargement

Uncertain findings:
Pleural thickening

Supported global buckets:
None

Localization support:
Cardiomegaly, Aortic enlargement

AI Decision-Support Report

Findings

Both the Swin classifier and YOLO detector demonstrate strong agreement in identifying cardiomegaly (Swin: 99.5%, YOLO: 80.9% confidence with localization) and aortic enlargement (Swin: 90.0%, YOLO: 51.8% confidence with localization). The cardiac silhouette appears enlarged on visual inspection, consistent with the model predictions. Aortic contour prominence is noted in the superior mediastinum. The Swin classifier also suggests possible pleural thickening (29.8% probability), though this lacks localization support from the YOLO detector.

AI Decision-Support Report

Findings

Both the Swin classifier and YOLO detector demonstrate strong agreement in identifying cardiomegaly (Swin: 99.5%, YOLO: 80.9% confidence with localization) and aortic enlargement (Swin: 90.0%, YOLO: 51.8% confidence with localization). The cardiac silhouette appears enlarged on visual inspection, consistent with the model predictions. Aortic contour prominence is noted in the superior mediastinum. The Swin classifier also suggests possible pleural thickening (29.8% probability), though this lacks localization support from the YOLO detector.

Impression

Findings consistent with cardiomegaly and aortic enlargement, supported by both classification and localization models. Possible pleural thickening requires further evaluation. No acute pulmonary findings identified.

Review Guidance

- Recommendation: supported
- Confidence: high
- Supported findings: Cardiomegaly, Aortic enlargement
- Uncertain findings: Pleural thickening
- Localization support: Cardiomegaly, Aortic enlargement

Safety

This is an AI-generated decision-support summary based on automated image analysis. Human radiologist review is required for clinical diagnosis and patient care decisions. This output should not be used as a substitute for professional medical interpretation.

Model Evidence Summary

Top Swin probabilities:

- Cardiomegaly: 0.995
- Aortic enlargement: 0.900
- Pleural thickening: 0.298
- Other lesion: 0.089
- Pleural effusion: 0.055
- Lung Opacity: 0.046
- Pulmonary fibrosis: 0.037
- Nodule/Mass: 0.019

Top YOLO detections:

- Cardiomegaly: 0.809 @ [171.6, 285.5, 414.3, 387.7]
- Aortic enlargement: 0.518 @ [258.0, 154.7, 319.2, 209.2]
