

# AI Decision-Support Report

Case: e9954e6e3b2d0c5bf990a519c0ba5abe

Chest X-ray

Recommendation: needs\_human\_review  
Confidence: moderate

Supported findings:  
Cardiomegaly, Pleural effusion, Pleural thickening, Lung Opacity, Pulmonary fibrosis

Uncertain findings:  
Aortic enlargement

Supported global buckets:  
Cardiomediastinal abnormality, Pleural abnormality, Airspace or infectious-inflammatory pattern, Chronic interstitial or fibrotic pattern, Possible urgent thoracic abnormality

Localization support:  
Cardiomegaly

## AI Decision-Support Report

**Findings**  
The chest radiograph demonstrates cardiomegaly with localization support from object detection. There is evidence of pleural effusion and pleural thickening. Lung opacity is present, consistent with an airspace pattern. Features suggestive of pulmonary fibrosis are noted. Aortic enlargement is detected by object detection but has lower confidence from image-level analysis.

**Impression**  
Multiple abnormalities are identified including cardiomegaly, pleural effusion,

# Rendered Report

## AI Decision-Support Report

### Findings

The chest radiograph demonstrates cardiomegaly with localization support from object detection. There is evidence of pleural effusion and pleural thickening. Lung opacity is present, consistent with an airspace pattern. Features suggestive of pulmonary fibrosis are noted. Aortic enlargement is detected by object detection but has lower confidence from image-level analysis.

### Impression

Multiple abnormalities are identified including cardiomegaly, pleural effusion, pleural thickening, lung opacity, and pulmonary fibrosis. The combination of findings suggests cardiomediastinal abnormality, pleural abnormality, airspace pattern, and chronic interstitial changes. Some findings may represent urgent thoracic abnormalities requiring clinical correlation.

### Review Guidance

- Recommendation: needs\_human\_review
- Confidence: moderate
- Supported findings: Cardiomegaly, Pleural effusion, Pleural thickening, Lung Opacity, Pulmonary fibrosis
- Uncertain findings: Aortic enlargement
- Localization support: Cardiomegaly
- Supported global buckets: Cardiomediastinal abnormality, Pleural abnormality, Airspace or infectious-inflammatory pattern, Chronic interstitial or fibrotic pattern, Possible urgent thoracic abnormality
- Uncertain global buckets: None
- Conflicts:
- Aortic enlargement detected by YOLO but not strongly supported by Swin classifier

### Model Evidence

## Rendered Report (cont.)

### Supported Findings With Confidence

- Cardiomegaly: high (Swin 0.94, YOLO 0.79)
- Pleural effusion: high (Swin 0.99)
- Pleural thickening: high (Swin 0.88)
- Lung Opacity: moderate (Swin 0.61)
- Pulmonary fibrosis: moderate (Swin 0.66)

### Uncertain Findings With Confidence

- Aortic enlargement: low (Swin 0.43, YOLO 0.38)

### Top Image-Level Probabilities

- Pleural effusion: 0.99
- Cardiomegaly: 0.94
- Pleural thickening: 0.88
- Pulmonary fibrosis: 0.66
- Lung Opacity: 0.61

### Localized YOLO Findings

- Cardiomegaly: 0.79 @ [157.8, 227.4, 423.6, 319.1]
- Aortic enlargement: 0.38 @ [254.9, 119.7, 312.3, 165.7]

### Safety

This is an AI-generated decision-support summary that requires human radiologist review for clinical use. The findings represent computational analysis and must be interpreted in clinical context by qualified medical professionals.

# Model Evidence Summary

Top Swin probabilities:

- Pleural effusion: 0.986
- Cardiomegaly: 0.936
- Pleural thickening: 0.883
- Pulmonary fibrosis: 0.664
- Lung Opacity: 0.614
- Other lesion: 0.466
- Aortic enlargement: 0.430
- Infiltration: 0.261

Top YOLO detections:

- Cardiomegaly: 0.790 @ [157.8, 227.4, 423.6, 319.1]
- Aortic enlargement: 0.380 @ [254.9, 119.7, 312.3, 165.7]

Conflicts:

- Aortic enlargement detected by YOLO but not strongly supported by Swin classifier
