

Example Comparison Report

Hard diffuse case with partial model capture

Case: 305e4add9c72c91e9984305bf4e85aee

Review status: needs_human_review Confidence: moderate

Image Comparison

Model Comparison

Reference	Swin	YOLO
Atelectasis, Infiltration, Lung Opacity, Other lesion, Pleural effusion, Pleural thickening, Pneumothorax, Pulmonary fibrosis	Predicted: Lung Opacity, Pleural effusion, Pleural thickening, Pulmonary fibrosis Correct: Lung Opacity, Pleural effusion, Pleural thickening, Pulmonary fibrosis Missed: Atelectasis, Infiltration, Other lesion, Pneumothorax	Predicted: Aortic enlargement Correct: none Missed: Atelectasis, Infiltration, Lung Opacity, Other lesion, Pleural effusion, Pleural thickening, Pneumothorax, Pulmonary fibrosis

Findings

- The chest X-ray demonstrates findings consistent with chronic pulmonary changes including pulmonary fibrosis and pleural abnormalities.
- There is evidence of pleural thickening and pleural effusion.
- Lung opacity is present, which may represent chronic interstitial changes or acute airspace disease.
- A possible aortic enlargement is detected but requires confirmation given conflicting model evidence.

Impression

- Findings suggest chronic interstitial lung disease with pulmonary fibrosis and pleural abnormalities including thickening and effusion.
- The presence of lung opacity may indicate either chronic fibrotic changes or superimposed acute process.
- Possible aortic enlargement requires clinical correlation.
- These findings warrant urgent clinical evaluation given the potential for acute components.

Agentic Workflow Summary

The agentic report favors Lung Opacity, Pleural effusion, Pleural thickening, Pulmonary fibrosis with a moderate confidence band and a needs_human_review review status. Primary AI-supported findings are Pulmonary fibrosis, Pleural thickening, Pleural effusion, Lung Opacity, while the remaining uncertain findings are Aortic enlargement. Relative to radiologist labels, Swin captured Lung Opacity, Pleural effusion, Pleural thickening, Pulmonary fibrosis and YOLO localized none. Overall pattern emphasis is Pleural abnormality, Airspace or infectious-inflammatory pattern, Chronic interstitial or fibrotic pattern, Possible urgent thoracic abnormality.

Supporting Evidence

Top Swin Probabilities

- - Pulmonary fibrosis: 0.981
- - Pleural thickening: 0.969
- - Pleural effusion: 0.944
- - Lung Opacity: 0.695
- - Aortic enlargement: 0.402
- - Infiltration: 0.371

Top YOLO Detections

- - Aortic enlargement: 0.26 @ [249.9, 151.3, 299.9, 191.7]

Takeaways

- Swin correct labels: 4 / 8
- YOLO correct labels: 0 / 8
- Swin key miss: Atelectasis, Infiltration, Other lesion
- YOLO key miss: Atelectasis, Infiltration, Lung Opacity

Confidence Rules Used

- Swin positive label cutoff: 0.50
- YOLO detection confidence cutoff: 0.25
- Agentic AI confidence band is qualitative and selected by the reviewer.

This is an AI-generated decision-support summary that requires human radiologist review and clinical correlation before any diagnostic or treatment decisions. The findings described are based on automated analysis and must be verified by qualified medical professionals.
