

Example Comparison Report

Dense pleural and airspace multi-finding case

Case: ba5e3409250a85483d6e39be759bc102

Review status: needs_human_review Confidence: moderate

Image Comparison

Model Comparison

Reference	Swin	YOLO
Consolidation, Lung Opacity, Other lesion, Pleural effusion, Pleural thickening, Pneumothorax, Pulmonary fibrosis	Predicted: Consolidation, Lung Opacity, Pleural effusion, Pleural thickening, Pulmonary fibrosis Correct: Consolidation, Lung Opacity, Pleural effusion, Pleural thickening, Pulmonary fibrosis Missed: Other lesion, Pneumothorax	Predicted: Aortic enlargement, Lung Opacity, Pleural effusion Correct: Lung Opacity, Pleural effusion Missed: Consolidation, Other lesion, Pleural thickening, Pneumothorax, Pulmonary fibrosis

Findings

- The chest X-ray demonstrates multiple abnormalities.
- There is evidence of pleural effusion with localization support from both models.
- Lung opacity and consolidation are present, suggesting an airspace process.
- Pleural thickening is also identified.

Impression

- Multiple thoracic abnormalities are present including pleural effusion, lung opacity with consolidation, pleural thickening, and pulmonary fibrosis.
- The combination of acute airspace disease and chronic fibrotic changes suggests a complex pulmonary process.
- Possible aortic enlargement requires further evaluation.
- The presence of pleural effusion and consolidation may represent urgent findings requiring clinical correlation.

Agentic Workflow Summary

The agentic report favors Consolidation, Lung Opacity, Pleural effusion, Pleural thickening, Pulmonary fibrosis with a moderate confidence band and a needs_human_review review status. Primary AI-supported findings are Pleural effusion, Lung Opacity, Consolidation, Pleural thickening, Pulmonary fibrosis, while the remaining uncertain findings are Aortic enlargement. Relative to radiologist labels, Swin captured Consolidation, Lung Opacity, Pleural effusion, Pleural thickening, Pulmonary fibrosis and YOLO localized Lung Opacity, Pleural effusion. Overall pattern emphasis is Pleural abnormality, Airspace or infectious-inflammatory pattern, Chronic interstitial or fibrotic pattern, Possible urgent thoracic abnormality.

Supporting Evidence

Top Swin Probabilities

- - Pleural effusion: 0.967
- - Lung Opacity: 0.933
- - Consolidation: 0.862
- - Pleural thickening: 0.848
- - Pulmonary fibrosis: 0.827
- - Atelectasis: 0.443

Top YOLO Detections

- - Aortic enlargement: 0.58 @ [256.2, 121.3, 315.0, 180.2]
- - Pleural effusion: 0.44 @ [66.3, 62.0, 234.0, 333.3]
- - Lung Opacity: 0.30 @ [78.8, 54.4, 227.3, 257.7]

Takeaways

- Swin correct labels: 5 / 7
- YOLO correct labels: 2 / 7
- Swin key miss: Other lesion, Pneumothorax
- YOLO key miss: Consolidation, Other lesion, Pleural thickening

Confidence Rules Used

- Swin positive label cutoff: 0.50
- YOLO detection confidence cutoff: 0.25
- Agentic AI confidence band is qualitative and selected by the reviewer.

This is an AI-generated decision-support summary that requires human radiologist review and clinical correlation before any diagnostic or treatment decisions. The findings should be interpreted in the context of the patient's clinical presentation and history.
