Clinical Summary

- Review status: needs_human_review
- Confidence: moderate
- Key findings: Pulmonary fibrosis, Pleural thickening, Pleural effusion, Lung Opacity
- Needs confirmation: Aortic enlargement
- YOLO localized: None
- Pattern summary: Pleural abnormality, Airspace or infectious-inflammatory pattern, Chronic interstitial or fibrotic pattern, Possible urgent thoracic abnormality
- Model disagreement: Aortic enlargement detected by YOLO but not strongly supported by Swin classifier

Findings

The chest X-ray demonstrates findings consistent with chronic pulmonary changes including pulmonary fibrosis and pleural abnormalities. There is evidence of pleural thickening and pleural effusion. Lung opacity is present, which may represent chronic interstitial changes or acute airspace disease. A possible aortic enlargement is detected but requires confirmation given conflicting model evidence.

Impression

Findings suggest chronic interstitial lung disease with pulmonary fibrosis and pleural abnormalities including thickening and effusion. The presence of lung opacity may indicate either chronic fibrotic changes or superimposed acute process. Possible aortic enlargement requires clinical correlation. These findings warrant urgent clinical evaluation given the potential for acute components.

Safety Note

This is an AI-generated decision-support summary that requires human radiologist review and clinical correlation before any diagnostic or treatment decisions. The findings described are based on automated analysis and must be verified by qualified medical professionals.

Supporting Evidence

YOLO Detections

- Aortic enlargement (0.26) @ [249.9, 151.3, 299.9, 191.7]

Supported Findings

- Pulmonary fibrosis: 0.98
- Pleural thickening: 0.97
- Pleural effusion: 0.94
- Lung Opacity: 0.70

Uncertain Findings

- Aortic enlargement: 0.40

Top Swin Probabilities

- Pulmonary fibrosis: 0.981
- Pleural thickening: 0.969
- Pleural effusion: 0.944
- Lung Opacity: 0.695
- Aortic enlargement: 0.402
- Infiltration: 0.371
- Other lesion: 0.348
- Atelectasis: 0.284
