Clinical Summary

- Review status: supported
- Confidence: high
- Key findings: Aortic enlargement
- Needs confirmation: None
- YOLO localized: Aortic enlargement
- Pattern summary: Cardiomeastinal abnormality

Findings

The chest X-ray demonstrates aortic enlargement. Both the Swin classifier (probability 0.89) and YOLO detector (confidence 0.26) identified this finding, with localization support provided by the detection model in the expected mediastinal region. While the Swin classifier also suggested moderate probabilities for pleural thickening (0.30) and lower probabilities for cardiomegaly (0.17) and calcification (0.09), these findings lack localization support from the detection model and are not definitively supported by the available evidence.

Impression

Findings consistent with aortic enlargement. This represents a cardiomeastinal abnormality that warrants clinical correlation and potential further evaluation as clinically indicated.

Safety Note

This is an AI-generated decision-support summary based on automated image analysis. Human radiologist review is required for clinical use and final interpretation. This summary should not be used as a substitute for professional medical judgment or definitive diagnosis.

Supporting Evidence

YOLO Detections

- Aortic enlargement (0.26) @ [272.6, 116.3, 329.1, 190.2]

Supported Findings

- Aortic enlargement: 0.89

Uncertain Findings

- None

Top Swin Probabilities

- Aortic enlargement: 0.890
- Pleural thickening: 0.303
- No finding: 0.237
- Cardiomegaly: 0.167
- Calcification: 0.091
- Other lesion: 0.081
- Pulmonary fibrosis: 0.055
- Pleural effusion: 0.022
