Clinical Summary

- Review status: needs_human_review
- Confidence: moderate
- Key findings: Pleural effusion, Lung Opacity, Consolidation, Pleural thickening, Pulmonary fibrosis
- Needs confirmation: Aortic enlargement
- YOLO localized: Pleural effusion, Lung Opacity
- Pattern summary: Pleural abnormality, Airspace or infectious-inflammatory pattern, Chronic interstitial or fibrotic pattern, Possible urgent thoracic abnormality
- Model disagreement: Aortic enlargement detected by YOLO but not strongly supported by Swin classifier

Findings

The chest X-ray demonstrates multiple abnormalities. There is evidence of pleural effusion with localization support from both models. Lung opacity and consolidation are present, suggesting an airspace process. Pleural thickening is also identified. Additionally, there are findings consistent with pulmonary fibrosis, indicating chronic interstitial changes. Aortic enlargement is detected by the localization model but receives lower confidence from the classification model, creating uncertainty about this finding.

Impression

Multiple thoracic abnormalities are present including pleural effusion, lung opacity with consolidation, pleural thickening, and pulmonary fibrosis. The combination of acute airspace disease and chronic fibrotic changes suggests a complex pulmonary process. Possible aortic enlargement requires further evaluation. The presence of pleural effusion and consolidation may represent urgent findings requiring clinical correlation.

Safety Note

This is an AI-generated decision-support summary that requires human radiologist review and clinical correlation before any diagnostic or treatment decisions. The findings should be interpreted in the context of the patient's clinical presentation and history.

Supporting Evidence

YOLO Detections

- Aortic enlargement (0.58) @ [256.2, 121.3, 315.0, 180.2]
- Pleural effusion (0.44) @ [66.3, 62.0, 234.0, 333.3]
- Lung Opacity (0.30) @ [78.8, 54.4, 227.3, 257.7]

Supported Findings

- Pleural effusion: 0.97
- Lung Opacity: 0.93
- Consolidation: 0.86
- Pleural thickening: 0.85
- Pulmonary fibrosis: 0.83

Uncertain Findings

- Aortic enlargement: 0.35

Top Swin Probabilities

- Pleural effusion: 0.967
- Lung Opacity: 0.933
- Consolidation: 0.862
- Pleural thickening: 0.848
- Pulmonary fibrosis: 0.827
- Atelectasis: 0.443
- Infiltration: 0.430
- Aortic enlargement: 0.351
