- Pleural thickening

Swin Classification

Predicted: No finding
Correct: None
Missed: Aortic enlargement,
Cardiomegaly, Pleural thickening
Overcalled: No finding

YOLO Labels

Predicted: Cardiomegaly
Correct: Cardiomegaly
Missed: Aortic enlargement,
Pleural thickening
Overcalled: None

Agentic Workflow Summary

Supported findings: No finding
Uncertain findings: Cardiomegaly
Final report labels: No finding
Pattern buckets: No acute abnormality

Evidence and Report Summary

Findings

The Swin classifier indicates no acute findings with high confidence (98.9%). However, the YOLO detector identifies a potential cardiomegaly in the lower mediastinal region with low confidence (26.5%). Visual inspection of the chest X-ray shows the cardiac silhouette, though assessment of cardiac size requires careful evaluation of technical factors and patient positioning. The lung fields appear clear without obvious consolidation, effusion, or pneumothorax. No focal lesions or masses are clearly evident.

Impression

Discordant AI model outputs regarding cardiac size assessment. While the image-level classifier strongly favors no acute abnormality, the object detection model suggests possible cardiomegaly with localization but low confidence. The chest X-ray appears technically adequate for interpretation. No other acute thoracic abnormalities are identified by either model.

Top Swin Probabilities

- No finding: 0.989
- Cardiomegaly: 0.010
- Pleural thickening: 0.003
- Other lesion: 0.002
- Pulmonary fibrosis: 0.001
- Aortic enlargement: 0.001

Presentation Takeaway

Swin correct labels: 0 / 3
YOLO correct labels: 1 / 3
Key miss for Swin: Aortic enlargement, Cardiomegaly, Pleural thickening
Key miss for YOLO: Aortic enlargement, Pleural thickening

Ground-Truth Boxes Top YOLO Detections

- Aortic enlargement @ [250.0, 120.8, 309.2, 168.6] - Cardiomegaly: 0.26 @ [189.0, 244.9, 398.9, 395.5, 351.8]
- Cardiomegaly @ [190.2, 252.3, 352.8]
- Pleural thickening @ [268.0, 62.3, 333.5, 76.0]
- Pleural thickening @ [151.2, 54.1, 214.2, 66.6]

Thresholds Used

Swin positive label cutoff: 0.50
YOLO detection confidence cutoff: 0.25
Agentic AI confidence band is qualitative, not a fixed numeric threshold.

Confidence Calculation

How this case's confidence was calculated

Per-finding band cutoffs: high ≥ 0.80 , moderate ≥ 0.50 , low < 0.50 .

Swin label threshold = 0.50. YOLO detection threshold = 0.25.

No finding: low from score = $\min(\text{Swin}(0.99), 0.49)$ because abnormal YOLO evidence exists

Cardiomegaly: low from score = $\max(\text{Swin}(0.01), \min(1.00, 0.6 \cdot 0.01 + 0.4 \cdot 0.26)) = 0.11$

Agentic AI report band reference: `moderate` occurred in 58 / 300 cases with exact-match accuracy 15.5%.

Interpretation note: the report-level agentic AI confidence band is constrained to high / moderate / low in the schema, but the model chooses that band. The per-finding confidence lines above are deterministic and computed from the Swin probability, YOLO support, and the label taxonomy.

This is an AI-generated decision-support summary that requires human radiologist review for clinical use. The conflicting model outputs
